25X1

[redacted] All eleven flight lines were flown as briefed with only minor deviations from course on five of them. In fact, the mission pilot adhered very close to the briefed route throughout the flight. 45 priority COMOR targets were photographed. Of this number, base line coverage was obtained on 8 of them. In addition to the COMOR targets above, 20 bonus targets were picked up. Generally, the weather was as briefed. Although the area of interest was forecast to be Category II, a small amount of Category III and IV weather was encountered, however, it did not impair the photo quality excessively. An estimated 35% cloud coverage was over the area of interest during the time of the photo runs.

7. Photo Quality Analysis:

a. The Film Evaluation Report submitted [ ] rated the film quality as good with the exception of contrast, 9R metering and data recording which were considered fair. Discrepancies noted were:

25X1

- (1) Edge static was apparent throughout 9L and 9R.
- (2) 5 frames on 9R had metering roll static.
- (3) There were approximately 25 frames that had pinholes on 9L and 9R.
- (4) Frilling was revealed on 45 frames on 9L.
- (5) 8 frames on 9L had abrasions.

b. The Immediate Photo Interpretation Report (IPIR) prepared by [ ] reported the overall quality of the film as good with 35% cloud cover. The majority of the target photos that were classified fair or poor were obliques and/or partially obscured by clouds or haze. A breakdown by target reveals 19 rated good, 26 fair and 20 as poor in so far as interpretability. No discrepancies were reported on the "B-2" Configuration used on this mission.
